Foreign Aid in Nepal
Welcome to the Foreign Aid in Ne
nent Platform (AMP), the online system that the Government and development
partners use to manage aid in Nepal. Find out what development partners are working on and what is being achieved, read profiles of donors and sectors, use the interactive map to see exactly where projects
and programmes are located and how aid matches up with various development indicators, and view in-depth reports. Providing public access to details of the nearly 700 foreign aid programmes and projects
active in Nepal is part of the Government's commitment to transparency, accountability and aid effectiveness. The Government itself uses AMP as an integral part of its public financial management system, with
the data informing the national budget and the planning of the Medium Term Expenditure Framework.
Project Search
Sectors
Start typing sector name then choose from list. Multiple entries possible.
News

Other Sources

1. Individual Donor databases and systems (eg. DFID DevTracker)
2. International and repositories (IATI, OECD, etc.)
3. Open Data Portals (eg. www.opennepal.net , www.model4g.net)
4. Etc.

2.Who uses the data and why ?

YoungInnovations

Government

- Inter agency coordination and collaboration
- Evidence based planning and policy formulation
- Monitoring and Evaluation

Civil Society

- Monitor development interventions
- Advocacy and lobbying

Journalists

- Data stories and in-depth analysis

Intermediaries

- Data aggregation, visualization and interpretation
- Capacity Development and data advocacy

YoungInnovations

3.The IATI Scenario

YoungInnovations

Prospect that IATI has brought

- Access to forward looking data from the source
- Tracking of expenditures
- Credibility and cross – verification
- Data on results and achievements
- Ranking and comparison of donors
- Opportunities for other government agencies to see resources flowing in their sectors
- Data from other sources (eg. I/NGOs)

Opportunities to make IATI work

- Cross-sectorial linkages (procurement, budgets, etc.)
- Sub-national and geo-coded data
- Mapping of results vs resources
- Linking commitment and disbursements to national plans and priorities
- Making traceability work for real
- Integration with national systems (eg. AMP)

Challenges

- Education and awareness – how to create demand for IATI ?
- Easy and contextual – how to make IATI data more understandable and contextual to country context ?
- Ownership and Commitment – how to ensure government and donor commitment at country level ?
- Traceability – how to make IATI publishers give a comprehensive picture?
- Results – how can we have IATI bring on a new discourse on result and performance ?
